

Communication

Date	01 July 2026
Team ID	XXXXXX
Project Name	OptiCrop: AI-Powered Smart Agricultural Production Optimization Engine
Maximum Marks	1 Mark

Communication Plan:

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle, including how updates, issues, and feedback were managed.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Mentor Progress Update	Weekly	WhatsApp / Email	Neelima & Project Mentor	Share weekly progress on each epic (EDA, preprocessing, model building, app, documentation), receive feedback, and clarify submission requirements.
2	Solo Daily Self-Review	Daily	Personal Task Tracker / Notebook	Neelima (Solo Developer)	Review daily tasks completed against the 7-day project plan, identify blockers, and adjust the next day's priorities accordingly.
3	Issue & Bug Tracking	As Needed	GitHub Issues / VS Code Terminal	Neelima (Solo Developer)	Identify, document, and resolve technical issues — Python environment errors, Flask routing bugs, pickle loading errors, and Jupyter kernel issues — using VS Code debug tools and GitHub commits.
4	Milestone Review	End of each Epic	Jupyter Notebook / VS Code	Neelima (Solo Developer)	Verify each milestone deliverable before moving to the next epic — e.g.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
					confirm model.pkl saved correctly before building the Flask app, confirm Flask app works before finalizing documentation.
5	Mentor Solo Approval Communication	Once	WhatsApp / Group Message	Neelima & Project Mentor	Formally communicated team inactivity to the mentor and received approval to proceed with solo submission, as per the program's policy for inactive teams.
6	Final Demo Rehearsal	Once	Local System — Browser + VS Code	Neelima (Solo Developer)	Run through the complete demo flow (Introduction → Problem → Solution → Code → Live App → Results) to verify the Flask app runs correctly, all three pages load, and the prediction returns the correct result before recording.
7	Documentation Review	Weekly	Google Drive / GitHub	Neelima (Solo Developer)	Review and update all project documents — ER diagram, DFD, tech stack, FR/NFR tables, functional features, performance testing, and demo planning — ensuring accuracy and consistency before final submission.

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	Difficulty coordinating team schedules	Fixed a common meeting time and shared updates through WhatsApp and Google Meet.
2	Integration issues between frontend and backend modules	Conducted collaborative debugging sessions and used GitHub for version control and code synchronization.
3	Delays caused by testing and bug fixes	Prioritized critical issues, assigned tasks efficiently, and completed performance testing using Apache JMeter before the final review.
